Assessment on the Agriculture and Fisheries in Htantabin Township, Yangon Division

Abstract

Htantabin Township is located near Yangon City. It has distinct characteristics of deltaic feature. The physical and climatic conditions are favourable for agricultural economy. To promote the agriculture production of the region, many pump irrigation projects are established along the rivers and streams which flow around Htantabin Township. In this research pump irrigation projects are assessed through the development of agriculture. Fisheries are developed in this area and it is gaining importance in the economic sectors of Htantabin Township.

Data and Methodology

Chapter I.	Factors Influencing Agriculture and Fisheries	1
	1.1 Physical Factors	
	1.2 Human Factors	8
	1.3 Institutional Factors	10
Chapter II.	Agricultural Activities	15
	2.1 Types of Agriculture	17
	2.2 Agricultural Land	18
	2.3 Paddy Cultivation and Production	22
	2.4 Other Crops	45
	2.4.1 Groundnut	
	2.4.2 Sesame	47
	2.4.3 Sunflower	50
	2.4.4 Pulses	51
	2.4.5 Banana	57
	2.4.6 Sugarcane	
	2.4.7 Vegetable	61
	2.5 Market	63

2.6	Use of fertilizers and pesticides	64
Chapter III.	Implementation of River Water Pumping Irrigation	68
3.1	Distribution of River Water Pumping Irrigated areas	
3.2	Pumping Stations	69
3.3	Benefit and Affected acreages	76
3.4	Institutional Factors	78
Chapter IV.	Fisheries	81
4.1	Development of Fisheries and Types of Fisheries	
4.2	Fish Culture	82
4.3	Prawn Culture	91
4.4	Leasable Fisheries	93
4.5	Open Fisheries	95
Chapter V.	Findings and Suggestions	109
5.1	Cost and Benefit of Monsoon and Summer Paddy Cultivation in the Study Area	
5.2	Cost and Benefit of Pulses and Sunflower Cultivation in the Study Area	111
5.3	Cost and Benefit of Fisheries in the Study Area	
5.4	Problems and Suggestions on Irrigation and Fisheries	112
Conclusion		113
